SUMMARY

Cybersecurity engineering student with hands-on experience in VAPT, web/API security testing, vulnerability assessment, security monitoring, network security, and security analysis, with developing knowledge of GRC, risk management, GDPR, ISO 27001, and data protection requirements.

TECHNICAL SKILLS

- **Cybersecurity & GRC:** VAPT | Vulnerability Assessment | Security Analysis | Security Monitoring | Risk Assessment | Security Policies | GDPR | ISO 27001 | DPDP Act | Security Compliance | CVSS | Security Reporting
- **Web & API Security:** OWASP Top 10 | OWASP API Security Top 10 | Web Application Security Testing | API Security Testing | SQL Injection | XSS | HTTP/HTTPS
- **Network & System Security:** TCP/IP | DNS | Firewalls | VPN Concepts | Network Traffic Analysis | Linux Security | Windows Security | Wireshark
- **Security Tools:** Burp Suite | Nmap | Nessus | OWASP ZAP | SQLmap | Metasploit | Nikto | Postman | Splunk | Suricata | Fail2Ban | Kali Linux
- **Programming:** Python | Bash | Java | PowerShell (Basic)

EXPERIENCE

Cyber Security Analyst, *HebeSec Technologies Pvt Ltd* Jun/2026 – Aug/2026 | Karaikudi
- Performed VAPT, manual web and API security testing, and source code reviews to identify and validate vulnerabilities.
- Prepared security documentation and VAPT reports, performed vulnerability revalidation, and gained exposure to IoT security tools.

Vulnerability Assessment & Penetration Testing Intern, *BCBUZZ Technology Pvt Ltd* Jun 2025 | Coimbatore
- Learned and practiced OWASP Top 10 web vulnerabilities and basic-level VAPT.
- Gained hands-on exposure to Docker and web application security testing.

PROJECTS

Automated Linux-Based Cyber Defence System 2026 – Present
- Developed a Bash-based security system integrating ClamAV, UFW, Fail2Ban, and Suricata for automated threat detection, firewall protection, and intrusion prevention.

CyberSentinel – Unified Network & Application Monitoring 2025 – 2026
- Built a web-based security platform for information gathering and security analysis, providing an interface for reconnaissance tasks and structured security findings.

Secure Scan – Network Intrusion Detection System 2024 – 2025
- Built a Python-Scapy-based NIDS to detect ICMP floods, ARP spoofing, TCP brute-force attempts, and DNS tunneling in real time with automated alert logging.

CERTIFICATIONS

- **RED TEAM LEADERS :** Certified LLM Security Professional (CLLMSP) (2026)
- **Tagger Institute :** Practical Web Application Security and Testing (2025)
- **EC-Council :** SQL Injection Attacks (2025)

ACADEMIC CREDENTIALS

B.E. Computer Science and Engineering (Cyber Security) 2023 – 2027 | Coimbatore
Dr.N.G.P. Institute of Technology
